## Subject: Forkbomb in container Posted by bastoune on Mon, 29 Apr 2013 10:02:22 GMT View Forum Message <> Reply to Message

## Hi everybody,

i'm trying to make hardening on containers to make users unable to damage the host node. I just tried a forkbomb in a container using python

import os while True: os.fork()

Running htop on my host node, I see that CPU usage is 100% on all cores, even if i setted params like cpuunit, cpus, cpulimit in configuration file.

How can I struggle against this ?

All my containers are precreated debian templates

Thx a lot
