Hello,

I'm working on the proxmox openvz/kvm distribution, and I would like to know if the support of rhel 6.4 kernel is on the roadmap ?

I recently see a lot of backport from rhel 6.4 to rhel 6.3 kernel, I don't know why ? (maybe it's too hard to port openvz to rhel 6.4 kernel ?). Is rhel 6.4 kernel on the roadmap ?

I ask the question because proxmox use both openvz and kvm, but I need some kvm patches from rhel 6.4. (Mainly hyper-v support inside kvm).

Best Regards,

Alexandre Derumier

Of course it's on the roadmap... If you look at the latest openvz testing kernels, you'll see that they are already rebased on RHEL 6.4 kernel.

This changelog, for example:

<http://wiki.openvz.org/Download/kernel/rhel6-testing/042stab078.6>

Oh, thanks, I have missed to read this changelog !

Thanks to the great work you do with openvz!
