Hi all,

I'm looking for an easy way (but not even know if it's possible ...) to revert to the old/legacy OpenVZ storage from ploop.

I've several CT using ploop i want to convert them to the standard OpenVZ storage layout.

Thanks in advance for your help !

/Xavier

Hi.

1. vzctl mount 2222
 2. cp from /vz/root/2222/ to /vz/private/2223/
 3. start 2223

Can you please tell us why you don't like ploop?

Hi Kir,

I've no problem with Ploop

For some reasons i want to use Proxmox and i can't use Ploop with it (not compatible) !

/Xavier

...and I can't seem use it with openvz under Xen via Amazon (ploop 1.6.1 w/ vzkernel 2.6.32-042stab078.10042stab076.7 - 2.6.32-042stab078.10042stab078.10), noted in more detail in a previous post:

```
sudo vzctl create 202 --ostemplate ubuntu-12.04-x86_64 --config unlimited --layout ploop  
--diskspace 3G
```

I/O error, no such file or directory:
/vz/private/202.tmp/root.hdd/DiskDescriptor.xml

/Fred
