Creating a virtual network tool, I need to use virtual technology, after many search (also see this http://en.wikipedia.org/wiki/Comparison_of_virtual_machines) I choose the technologies who run native guest.

I've three candidates to my project :

linux vserver
openvz
freevps

I can't decide who is better for my networking project, it will be helpful if someone can help me.

Thank You

It is not a right place to ask this.

OpenVZ has fully virtualized networking, supporting networking virtualization both at the IP and Ethernet level.

Check <http://wiki.openvz.org/Category:Networking> for more details.

Yes I know it isn't the place.. But where is the place!?

And I found this thread http://forum.openvz.org/index.php?t=tree&goto=341&&a mp;a mp;srch=freevps#msg_341 on this forum but it is in a language that I can't understand...

Technologies are similar but who is the most advanced in network virtualization!?

Thank for help

It is in Russian. The sense is the same - we are biased, and we are welcome complete comparison of the third party. But we don't know such comparisons yet.
