Hello,

I'm currently running into an issue with yum I have been unable to fix.

I have removed all the old unused kernels this fixed a lot of the errors but not this last one.

```
[root@vz2 boot]# rpm -q vzkernel  
vzkernel-2.6.32-042stab078.22.x86_64
```

```
[root@vz2 boot]# uname -a  
2.6.32-042stab078.22 #1 SMP Sat Jun 8 16:43:06 MSK 2013 x86_64 x86_64 x86_64 GNU/Linux
```

I have attached yum update below.

```
[root@vz2 boot]# yum update  
Loaded plugins: fastestmirror

```

kernel-firmware = 2.6.32-358.6.1.el6
Available: kernel-firmware-2.6.32-358.6.2.el6.noarch (updates)
kernel-firmware = 2.6.32-358.6.2.el6
Available: kernel-firmware-2.6.32-358.11.1.el6.noarch (updates)
kernel-firmware = 2.6.32-358.11.1.el6
You could try using --skip-broken to work around the problem
You could try running: rpm -Va --nofiles --nodigest

Thanks this seems to have fixed the yum issue.

Now my openvz's didn't start tho after the reboot. This is a SolusVM slave server.

Update.

```
[root@vz2 voomo]# uname -a
Linux vz2.voomo.com 2.6.32-358.11.1.el6.x86_64 #1 SMP Wed Jun 12 03:34:52 UTC 2013
x86_64 x86_64 x86_64 GNU/Linux
```

But none of my SolusVM's are working on this server now.

Thanks,

Update # 2 Vz's are back online

I had to install the vzkernel-fireware again and then edit the /boot/grub/grub.conf and change the default kernel from 0 to 1 and boot back into 2.6.32-042stab078.22 for the vz's to come back online.
