Hello,
today one server got reset.
After reboot some VPS not start:

```
Adding delta dev=/dev/ploop63316 img=/vz/private/27/root.hdd/root.hdd (rw)
Mounting /dev/ploop63316p1 at /vz/root/27 fstype=ext4
data='balloon_ino=12,usrjquota=aquota.user,grpquota=aquota.group,jqfmt=vfsv0,'
Error in ploop_mount_fs (ploop.c:1109): Can't mount file system dev=/dev/ploop63316p1
target=/vz/root/27: Invalid argument
Failed to mount image: Error in ploop_mount_fs (ploop.c:1109): Can't mount file system
dev=/dev/ploop63316p1 target=/vz/root/27: Invalid argument [21
```

```
du -sh /vz/private/27/root.hdd/*
4.0K  /vz/private/27/root.hdd/DiskDescriptor.xml
0     /vz/private/27/root.hdd/DiskDescriptor.xml.lck
41G   /vz/private/27/root.hdd/root.hdd
```

Does any body now how to start them?

looks like it is filesystem error problems:

```
ploop mount /vz/private/27/root.hdd/root.hdd
Error in ploop_fsck (fsck_util.c:380): Dirty flag is set
Error in ploop_mount (ploop.c:1367): /vz/private/27/root.hdd/root.hdd (rw): irrecoverable errors
```

Problem solves peaty easy:
Mount ploop:
ploop mount /vz/private/27/root.hdd/DiskDescriptor.xml

And check created ploop device:
fsck /dev/ploop59031p1

After that container may be started

We will introduce automatic file system checking on mount to avoid problems like this
