1) vzctl set VE\_ID --quotaugidlimit 100 --save  
2) vzctl stop VE\_ID  
3) vzctl start VE\_ID  
remount is prohibited indeed.

Unable to open /dev/hdb1  
root@mail:/# fdisk /dev/hdb

The number of cylinders for this disk is set to 30401.  
There is nothing wrong with that, but this is larger than 1024,  
and could in certain setups cause problems with:  
1) software that runs at boot time (e.g., old versions of LILO)  
2) booting and partitioning software from other OSs  
(e.g., DOS FDISK, OS/2 FDISK)
