Hy Everyone.

Newbie here, i installed Openvz according to instruction ([openvz.org/Quick\\_installation](http://openvz.org/Quick_installation)), but getting an error

vzctl: command not found

while running

vzctl create 10 --ostemplate ubuntu-9.04-x86\_64

Is there any way to check openvz is installed properly?

did you executed command:

yum install vzctl vzquota ploop  
?

You may need to run "sudo vzctl" if you are not already root.

Look for /usr/sbin/vzctl or do "man vzctl"
