Subject: Online migration with a shared backend filesystem
Posted by Zirafarafa on Wed, 14 Aug 2013 16:01:21 GMT

Hi all

I have some openvz HNs which share a NFS backend filesystem, on which the guest ploop images are kept.

Are there any patches/plans for the vzmigrate script to support shared filesystem migration. If not, I will try make some patches to support this.

dunno about openvz team plans but as I understood some people are using nfs as shared storage for cts. If they use vzmigrate for migration I believe that they altered this script and use some custom sollutions. even some bug reports and forum topics says that.
If you have some patches I believe openvz team will like them to add. please submit bug report as a enhancement, provide patches and than maybe this will be included in next vzctl releases.
