when I boot, i got a message like:
freeing unused kernel memory : 203k..

what the problem is ? ,I installed ovzkernel-2.6.8-022stab078.14.i686.rpm version.

Does the kernel panic after this message? If there is there some other problem than the message itself, mention it.

I change to install kernel 2.6.16-1.2133_FC5.026test015, and no problems.

thanks.
