Subject: \*SOLVED\* openvz repo down?

Posted by [Rene](#) on Sun, 24 Sep 2006 05:20:08 GMT

---

I've been following howto [http://wiki.openvz.org/Quick\\_installation](http://wiki.openvz.org/Quick_installation) in order to setup OpenVZ on CentOS 4.4, using the yum method.

Everything goes well until and including rebooting to the OpenVZ kernel, but I am unable to install the utilities:

First I followed the howto precisely and got this error:

Quote:

```
[root@localhost ~]# yum install vzctl vzquota
```

```
Setting up Install Process
```

```
Setting up repositories
```

```
Cannot find a valid baseurl for repo: openvz
```

```
Error: Cannot find a valid baseurl for repo: openvz
```

I then checked `/etc/yum.repos.d/openvz.repo` and uncommented those repos that seems to make sense (no mention was made of this in the howto)

[quote] <-- btw, there seems to be a bug in this forum software, the quote function seems faulty.

```
[root@localhost yum.repos.d]# cat openvz.repo
```

```
[openvz]
```

```
name=OpenVZ stable kernel and utilities
```

```
baseurl=http://download.openvz.org/current/
```

```
mirrorlist=http://download.openvz.org/mirrors-current
```

```
enabled=1
```

```
gpgcheck=1
```

```
gpgkey=http://download.openvz.org/RPM-GPG-Key-OpenVZ
```

```
[openvz-kernel-devel]
```

```
name=OpenVZ development kernel
```

```
baseurl=http://download.openvz.org/kernel/devel/current/
```

```
mirrorlist=http://download.openvz.org/kernel/mirrors-devel
```

```
enabled=0
```

```
gpgcheck=1
```

```
gpgkey=http://download.openvz.org/RPM-GPG-Key-OpenVZ
```

```
[openvz-kernel-fc5]
```

```
name=OpenVZ Fedora Core 5 kernel
```

```
#baseurl=http://download.openvz.org/kernel/fc5/current/
```

```
mirrorlist=http://download.openvz.org/kernel/mirrors-fc5
```

```
enabled=0
```

```
gpgcheck=1
```

```
gpgkey=http://download.openvz.org/RPM-GPG-Key-OpenVZ
```

```
[openvz-kernel-rhel4]
name=OpenVZ Red Hat Enterprise Linux 4 kernel
baseurl=http://download.openvz.org/kernel/rhel4/current/
mirrorlist=http://download.openvz.org/kernel/mirrors-rhel4
enabled=0
gpgcheck=1
gpgkey=http://download.openvz.org/RPM-GPG-Key-OpenVZ
```

```
[openvz-kernel-suse10]
name=OpenVZ SUSE10 kernel
#baseurl=http://download.openvz.org/kernel/suse10/current/
mirrorlist=http://download.openvz.org/kernel/mirrors-suse10
enabled=0
gpgcheck=1
gpgkey=http://download.openvz.org/RPM-GPG-Key-OpenVZ
/quote]
```

but this just give more errors:

Quote:

```
[root@localhost yum.repos.d]# yum install vzctl vzquota
Setting up Install Process
Setting up repositories
http://download.openvz.org/current/repodata/repomd.xml: [Errno 4] IOError: <urlopen error (101,
'Network is unreachable')>
Trying other mirror.
Cannot open/read repomd.xml file for repository: openvz
failure: repodata/repomd.xml from openvz: [Errno 256] No more mirrors to try.
Error: failure: repodata/repomd.xml from openvz: [Errno 256] No more mirrors to try.
[root@localhost yum.repos.d]# yum install vzctl vzquota
Setting up Install Process
Setting up repositories
http://download.openvz.org/current/repodata/repomd.xml: [Errno 4] IOError: <urlopen error (101,
'Network is unreachable')>
Trying other mirror.
Cannot open/read repomd.xml file for repository: openvz
failure: repodata/repomd.xml from openvz: [Errno 256] No more mirrors to try.
Error: failure: repodata/repomd.xml from openvz: [Errno 256] No more mirrors to try.
```

Hmmm.... is nameserver set? Can you manually download repodata from node in question:  
# wget http://download.openvz.org/current/repodata/repomd.xml?

Thanks.

Hi there

I encountered the same problem.

Seemed like some firewall issue, as after I shut down iptables, it works.

HTH
