At my OpenVZ server i did command: yum update and the result is:

Quote:

```
=====
=====
Package           Arch           Version                               Repository           Size
=====
Installing:
ovzkernel          x86_64         2.6.18-348.16.1.el5.028stab108.1    openvz-kernel-rhel5 25 M
Updating:
initscripts        x86_64         8.45.42-2.el5.centos.1              updates              1.6 M
vzctl              x86_64         4.5.1-1                              openvz-utils         122 k
vzctl-core         x86_64         4.5.1-1                              openvz-utils         269 k
```

Please is it safe to update ovzkernel this way? can it cause any issues?
