Hi,

I have a very old box running openvz with this kernel:
2.4.20-021stab022.4.777

Does someone here have these kernel patches or a source rpm (i need to build a module for this kernel, fuse to be more exact).

Thanks,
Adrian.

I suppose you're using not OpenVZ, rather Virtuozzo, 'cause from the moment of appearance OpenVZ was always based on 2.6 kernel.

So if you're SWSOft customer turn to SWSOft support with this question.
