I add a network called dalnet and when I try to add a server to dalnet it always places that sever under my main server list. Any idea why it is doing this?

For example:

```
/addnetwork dalnet~  
then  
/addserver dalnet~[server name]
```

Here is an example of the error:

```
<-psyBNC> Server #1: irc.blessed.net port 6667
```

```
<-psyBNC> Server #2: dalnet~hotspeed.sg.as.dal.net port
```

Does this problem occur under a non-openvz VE? How can you be sure this is caused by openvz, seems too far into userspace to me.
