Hi ,everybody I have a problem when I open VE gnome via VNC.

I installed VE's xorg-x11, VE's Gnome, VE's vnc-server, and follows the steps by Docs.

Everything is ok, I can open VE twn via VNC, and it works.

But when I change twn to Gnome, and got some problems:

1) some time it shows a message : "This program cannot start until you start the dbus session service" ....

2) some time it shows gnome's setting not correct, but how can I check and modify gnome's setting?

3) some time it can start the gnome window, but I can't see the top and bottom control panel ....

Anybody get gets the same problem, and solve it already?

Hello,

Please, check Gnome logs...

Also, what does /proc/user\_beancounters file content after such unsuccess Gnome start?

Thanks.

From this information we can see, that  
 kmemsize, othersockbuf, othersockbuf limits are to small.  
 You should increase this limits.

YES~~~~~

3Q so much !!!!!!!

you figure out the point, now I modified the paramemters and it works now!

Thanks !!!
