Hi all,

I am running Ubuntu 10.04 on my HP server, after the OpenVZ kernel is running on Ubuntu 10.04. Then I tried to install VPS on it, but I always get this error message, and after that, the server is frozen and I have to hard restart the server again.

Pls check the error in attach file.  
Thanks so much!

If you followed this howtoforge article step by step than I would not be surprised by such errors.

probably I would recommend to read this article:  
[https://wiki.openvz.org/Install\\_kernel\\_from\\_RPM\\_on\\_Ubuntu\\_10.04](https://wiki.openvz.org/Install_kernel_from_RPM_on_Ubuntu_10.04)

but while reading this:  
[https://wiki.openvz.org/Install\\_kernel\\_from\\_RPM\\_on\\_Debian\\_6.0](https://wiki.openvz.org/Install_kernel_from_RPM_on_Debian_6.0)

probably you can get some help from here:  
[https://wiki.openvz.org/Installation\\_on\\_Debian](https://wiki.openvz.org/Installation_on_Debian)

otherwise please report vzctl, kernel versions.

please take a note that howtoforge article suggests to get vzctl from git. that means there can be bugs, better use released versions.

Follow Paparaciz's answer and post any additional questions you might have, with detailed information about your system.

thanks, I did find the solution.

to solve this issue, just turn off the 'disk quota' feature, by setting the 'DISK\_QUOTA=no' in the /etc/vz/vz.conf file, the path may vary according to your distro.

Hi,you can try this one

to solve this issue, just turn off the 'disk quota' feature, by setting the 'DISK\_QUOTA=no' in the /etc/vz/vz.conf file, the path may vary according to your distro.

for me,it's working now.
