Subject: Memory 0 MB 0 MB, the object has exceeded the quota for memory
Posted by postcd on Mon, 11 Nov 2013 16:21:18 GMT

Hi, im using OpenVZ and HyperVM as a control panel for it, one VPS got frozen somewhat not accessible and in HyperVM i can see an orange icon next to memory usage saying something like: the object has exceeded the quota for memory

Memory 0 MB 0 MB

I know i can fix by restarting, but..

Please why this happen, how to fix so it dont appears again?

What is this command:?
sh /script/fixquota

Can i setup any script to restart automatically a VPS which is unrecoverably failed like that? thx for inputs

This is a HyperVM question, so perhaps you'll have more luck on their forum.
