Hello,

As I know, up to now, OpenVZ has not released the stable ovzkernel, which rebase to CentOS 5.10 one (2.6.18-371).

Do anyone knows any issue to update the host and guest to CentOS 5.10 , but keep the ovzkernel to latest (2.6.18-348.16.1.el5.028stab108.1) ?

Thank you very much for kind attention.

Regards
George

I have updated some HN servers to centos 5.10 with kernel 2.6.18-308.20.1.el5.028stab104.3 with no issues. waiting to reboot them.
with CT's it is no problem at all.

also don't see any problems with centos5-testing kernel version (2.6.18-371.el5.028stab109.2PAE for 20days, 2.6.18-371.el5.028stab109.3PAE installed but waiting for reboot).

so I think you are safe to update to centos 5.10.
