I don't have a kernel version yet because I cannot get booted. I need to know where to find a listed of supported MegaRAID controllers. I have a quad XEON processor server with 24GB of RAM and 20TB to support. The motherboard is a X7QCE.

Thank you in advance and Happy Holidays!

I guess I could have been a little clearer. A link to a list of supported controllers. But that brings up a question to me, an intermediate at best user. Is it a s RAID controller for a SaS controller that I need? I don't know. I have a quad XEON with 24GB of RAM and I need a controller that can handle 4GB drives in RAID 5 for a total of 20TB.

As always, thank you in advance.
