Subject: OpenVZ kernel based on CentOS 6.5?

---

Greetings all, this is my first post here. I've been waiting a while for OpenVZ to adopt a CentOS 6.5 kernel as this resolves a serious XFS-related crash in the 6.4 kernel line. I've been effectively stuck on a 6.3 kernel since June 2013. Is there any idea when this new kernel will be released, even in 'testing' form?

I am using flashcache (from facebook) overtop of an XFS filesystem to accelerate reads on key data. I tried to post the link to this issue but I'm being blocked by my limited number of posts.
