Hello
I have huge problem. I installed OpenVZ and created containers (nginx+apache), containers has internet all work perfectly.. But I dont understand how I can connect to container from ssh or ftp. My server has external ip, but containers only 192.168.1.101 192.168.1.102 ..
Please help me
Thank you

I am unsure if this helps but for some reason I have been unable to connect using wireless devices to my containers. via ssh . I think I narrowed it down to they all share the same mac address. . I can connect fine via my standard workstation wired computer running linux debian.

I have been trying a way to give each container its own mac address. If this at all helps or if I wam way off please let me know thanks
