---

Hello

-kernel version 2.6.16  
-openvz-patch version 2.6.16-026test015  
-openvz config kernel-2.6.16-026test015-i686.config.ovz

Before using the patched kernel i can mount any nfs shares.

After i patched and compiled him, somethimes i can't mount nfs shares.

If i do it some time later, it works.

It is a problem caused by openvz?

I get following error message:

mount: nfs-server:/mnt/sdb1/usr: can't read superblock

Mayby you can help me..

Regards

Florian

Please, check is it your case:  
[http://bugzilla.openvz.org/show\\_bug.cgi?id=251](http://bugzilla.openvz.org/show_bug.cgi?id=251)

Thanks.
