Hello,

after migrating VM to a new server, which linux files i need to edit so everything like websites start working?

i see

/etc/hosts

/etc/sysconfig/network-scripts/ifcfg-venet0:0

/var/named/chroot/var/named/domainname.com

are one where old IP remains

use vzctl

p.s. please take more time to read wiki, documentation. find answer by yourself. it's quite strange to see such and other your questions from servers provider (as you advertising).

vzctl does edit startup files inside the container as well as /etc/vz/VEID.conf. really, it's the easy way to do it.

vzctl set VEID --ipdel OLD\_IP --save

vzctl set VEID --ipadd NEW\_IP --save

If you must edit files to change the IP, it will probably work if you shut down the VE, edit IP in etc/vz/VEID.conf, then start the container. But please test it.

---

For websites and named, of course you'll have to edit the configs, vzctl doesn't do that
