This question is specific to CRIU, not so much OpenVZ, but there doesn't seem to be a forum on the CIRU.org site. Let me know if there is a better place to ask this question.

Question:

I downloaded and built criu1.2 on ubuntu 13.10.

When I do "criu check --ms" I get the following:

"The current kernel doesn't support packet_diag...Make sure you have *_DIAG kernel config options turned on..."

How to resolve this issue? Do I need to rebuild the kernel or is there a simpler way to get CRIU to not throw errors? Any pointers would be helpful on next steps.
