Hi,

Doing some maintenance task on my server, I found this situation :

```
HN:~# ls /var/lib/vz/private
151.tmp 2001 2002 2003 3000 315
```

```
HN:~# ls /vz/private/
150 2000 4000 495 5000
```

```
HN:~# vzlist
  CTID   NPROC STATUS
  315    97 running
  495   124 running
 2001   136 running
 3000    58 running
 4000    43 running
 5000    24 running
```

So, I need to move the private areas from `/var/lib/vz/private` to `/vz/private/`

Do you know any guide to do this correctly,

Thanks !

I would stop CT, move CT folder to right place, edit CT config file and start CT
