iptables: Applying firewall rules: iptables-restore: line 44 failed

So i did flush and reinstall of iptables:

```
iptables -F  
yum reinstall iptables
```

did not helped

So i chacked my OpenVZ VPS config file on host node (/etc/vz/conf/860.conf) and it contains some rules:

```
IPTABLES="ip_tables iptable_filter iptable_mangle ipt_limit ipt_multiport ipt_tos ipt_TOS  
ipt_REJECT ipt_TCPMSS ipt_tcpmss ipt_ttl  
ipt_LOG ipt_length ip_conntrack ip_conntrack_ftp ipt_state iptable_nat ip_nat_ftp ipt_recent  
ipt_owner"
```

so i restarted VPS: vzctl restart 860

Then entered VM: vzctl enter 860  
entered into CT 860

```
service iptables status  
Table: mangle  
Chain PREROUTING (policy ACCEPT)  
num target prot opt source destination  
....various rules here.....
```

```
service iptables stop  
iptables: Setting chains to policy ACCEPT: mangle filter na[ OK ]  
iptables: Flushing firewall rules: [ OK ]  
iptables: Unloading modules: [ OK ]
```

```
service iptables start  
iptables: Applying firewall rules: iptables-restore: line 44 failed  
[FAILED]
```

Anyone knows please how to find issue?

for the start point you should debug which iptable rule doesn't work.

Not sure why, but modprobe commands (modprobe iptablesmodulename) was not run on host node server reboot. I thought i wont need to execute these on each openvz server boot.

Paparaciz wrote on Mon, 28 April 2014 16:37 what exactly iptables modules you modprobed?

These which i set for my VM:

```
IPTABLES="ip_tables iptable_filter iptable_mangle ipt_limit ipt_multiport ipt_tos ipt_TOS  
ipt_REJECT ipt_TCPMSS ipt_tcpmss ipt_ttl ipt_LOG ipt_length ip_contrack ip_contrack_ftp  
ipt_state iptable_nat ip_nat_ftp ipt_recent ipt_owner"  
just adding modprobe before module name
```
