Subject: configfs in VE Posted by mdk999 on Wed, 18 Jun 2014 18:01:42 GMT View Forum Message <> Reply to Message

I was wondering if it was possible to install cman inside a VE. Ideally it needs access to configfs. The configfs module is loaded on the host but the VE cannot access the module. Any help would be appreciated. This is on a Centos 6 install and a Centos 6 VE.
