Hi guys,

is there any command to freeze a container?

I know suspend..

but this command checkpoints the container as well..

is there any command that just Freeze the container???

thanks..

What do you mean by freeze? Why doesn't suspend work, that is essentially what suspend does, it freezes the container until you resume it. Have you looked at [https://openvz.org/Checkpointing\\_and\\_live\\_migration?](https://openvz.org/Checkpointing_and_live_migration?)
