Facing problems with my openvz installtion, followed the quick install guide on centos 6.5, I have installed the OpenVZ web panel and it doesnt show me any physical server, if I add one, it doesn't let me download the OS.

Also, if I reboot the server, it gets stuck and doesn't come back live.

```
[root@lms ~]# uname -a
Linux lms.server.com 2.6.32-042stab093.4 #1 SMP Mon Aug 11 18:47:39 MSK 2014 x86_64
x86_64 x86_64 GNU/Linux
```

```
# grub.conf generated by anaconda
#
# Note that you do not have to rerun grub after making changes to this file
# NOTICE: You have a /boot partition. This means that
#         all kernel and initrd paths are relative to /boot/, eg.

initrd /initramfs-2.6.32-358.el6.x86_64.img

We're using a fortigate firewall behind the server, are there any specific rules which need to be added?

Thanks

So, what do you see in your log files at the time of the reboot? Any errors? What do you need to do to have your server properly boot again, hard reset?

As for the "OpenVZ web panel" issues, that's a 3rd party software with a name that often causes confusion. You should contact them for support.
