Hey guys, I am newbie to some of these cool things. I have a CentOS server and created 2 Virtual Machines with OpenVZ. But on starting pacemaker I get this error and friends there is no module loaded lsmod returns nothing;

```
[root@node2 selinux]# /etc/init.d/pacemaker start
Starting cluster:
  Checking if cluster has been disabled at boot...      [ OK ]
  Checking Network Manager...                          [ OK ]
  Global setup...                                      [ OK ]
  Loading kernel modules... FATAL: Module configfs not found.
                                          [FAILED]
```

Kernel:
2.6.32-042stab094.7 x86_64 x86_64 x86_64 GNU/Linux
