Subject: VE UUID Setting

Hi,

I'm trying to get a handle on under what circumstances the #UUID=XXX is created in the VE conf file per VE. Some of my VE's have it in their config file and others don't. Libvirt relies on this setting in the config file and I want to make sure I'm creating the VEs in a way that the #UUID=XXX line will exist.

Thanks,

Chris

For anyone else finding this. The #UUID I was seeing was a side-effect of using libvirt to create the OVZ instance. Libvirt maintains the #UUID setting inside of the VE conf file. When you create OVZ instances with vzctl you won't get the #UUID (or my confusion).

Chris
