Hello

is i use the vzlist command i see the container and the ipv4 adresse.

Is there a way to show the ipv6 Adresse?

How to deltet a IPv6 adresse?

How to overvrite a IPv6 adresse?

thanks for your feedback

have a nice day

vinc

Look up the wiki/man pages. You can manage IPv6 just like IPv4 for the most part.

As for vzlist, vzlist -L lists all the possible output options. No specific option for IPv6, I imagine the first IP address added to the container will be listed with 'ip' whether it is ipv6 or ipv4.
