Subject: Kernel Panic in OpenVZ Booting Stage - CentOS boots fine

Hello Team,

I am new into Virtualization technology .... seeking hands for expertise to move on ...

Recently got my dedicated server set up in Montreal DataCenter ... got installed CentOS from datacenter guys ...

Further then, I installed OpenVZ kernels followed by site...

Main node, DNS1-2, set up finished, ssh config finished... all worked fine ...

Suddenly I tried to install ssl on the main node (Host), I don't know what I did during that process!

Henceworth,

After rebooting, I lost access to OpenVZ ... after diagnose came to know that it was Kernel Panic issue that was not letting OpenVZ to run any of the containers inside...

I went through long time set up for all Virtualization and had to start from scratch again!

I am little scared to use OVZ platform as stable platform or not!

what if problem occurs again, what will I do ... seek support on forum while all of servers are down...

or just move on with Xen, VM, abc to have as stable platform!

Any expert who have used OpenVZ more than 2 years are can raise hand to say 'YES' it is stable platform and a hoster can rely on it!!!

I am raising hand and say YES

what was the reason of kernel panic??

Hello!

Thanks for raising your hand~

I could see atleast one vote saying "Yes" it is a stable platform!

Upon installing SSL on main node, OVZ Kernels could not boot, message kernel panic!

I did not have much time to play around with Hyperviser, neither support so I decided not to use Virtualization till I get support from experts ...

Any idea I can have support from any team!

Looking forward~

please explain what do you mean
Quote:Upon installing SSL on main node, OVZ Kernels could not boot, message kernel panic!

you were installing openssl?
after installing openssl you rebooted node?
was new openvz kernel installed? did it booted with previous kernel version?

what OS, kernel and openvz tools you are using?

you can always buy support from parallels.
http://sp.parallels.com/support/virtualization-suite/openvz/
