I want to set IP Rotation using iptables so I am using below code. Don't know what is the wrong, It is showing error iptables: No chain/target/match by that name.

```
iptables -t nat -I POSTROUTING -m state --state NEW -p tcp --dport 25 -o venet0 -m statistic  
--mode nth --every 5 --packet 0 -j SNAT --to-source x.x.x.1  
iptables -t nat -I POSTROUTING -m state --state NEW -p tcp --dport 25 -o venet0 -m statistic  
--mode nth --every 5 --packet 0 -j SNAT --to-source x.x.x.2  
iptables -t nat -I POSTROUTING -m state --state NEW -p tcp --dport 25 -o venet0 -m statistic  
--mode nth --every 5 --packet 0 -j SNAT --to-source x.x.x.3
```

Please help me to solve this. I am using Centos. Its Virtualization Type is OpenVZ
