## Subject: LLDP? Posted by duduhandelman on Sun, 31 May 2015 11:05:28 GMT View Forum Message <> Reply to Message

Hi All,

Maybe someone had a success with running LLDP?

I found that knowing where the virtual or physical machines are phisically connected is a great feature.

Currently I have no problem to run LLDP on a physical ubuntu. so in one command on the switch I know exactly where each server is connected.

I have tried two methods with no luck.

1. using a package name ladvd

2. using a packge named lldpad

Both have issues. Ladvd does not require any configuration by default just install and that's it.

Thanks in advance.

David
