Subject: Is Grsecurity still available or has it been removed?

I am using kernel 2.6.32-042stab108.5 and according to the documentation at openvz dot org/Grsecurity I should have access to some grsecurity features. However /proc/sys/kernel/grsecurity/ does not exist on my system. Have the Grsecurity features been removed?

In 2013 there was somebody asking the same question but he/she never got an answer: forum.openvz dot org/index.php?t=msg&goto=49726
I would have posted into this thread but for some reason I get an error message ("not logged in").
