Hi list,

Patch removing logmessage "Open /dev/pts/X"
from src/enter.c when entering VE

Before:

```
# vzctl enter 1010
entered into VE 1010
Open /dev/pts/0
    root@dev-test2:/#
```

After:

```
# vzctl enter 1010
entered into VE 1010
root@dev-test2:/#
```

Best regards,

Segtel A/S

This is useful debug message, why to remove it?
If the problem is that the next line is shifted, then we need another fix.

Kristian,

have you raised your default vzctl loglevel?
if so, then dim@ is right. you are using verbose mode.
and the shifted command line should be fixed then.

Thanks,
Kirill

Well, well.
Yes, I have
LOG_LEVEL=9

So loglevel is for console/terminal and logfile.
I want information in my logfile, but a quiet console.

Regards,
Kristian.

Mmm, I can't see many usecases... can you describe how you use it?
usually higher log levels are needed for debugging only...

I suppose CONSOLE_LEVEL option can be added.
Care to make a patch?

Thanks,
Kirill

I don't think loglevel should make any difference for console output.
I don't think --verbose should make any difference for logfile loglevel.

As I would like it:

I would like level 2 log in my logfile and "none" on the console.
If I have a problem I would use --verbose on the cmd-line to raise
level on console or look in the logfile.

Logfile on start: (this is the same as standard loglevel 2)
VE 1010 : Starting VE ...
VE 1010 : Mounting root: /var/.../root/1010 /var/.../private/vz20061009
VE 1010 : Running: /etc/vz//conf/vps.mount
VE 1010 : VE is mounted

```
VE 1010 : Running VE script: /etc/vz/dists/scripts/none
VE 1010 : Setting CPU limit: 50
VE 1010 : Setting CPU units: 1000
VE 1010 : Configure meminfo: 10240
VE 1010 : Set hostname: vs1010
VE 1010 : Running VE script: /etc/vz/dists/scripts/none
VE 1010 : Configure veth devices: ve1010.0
VE 1010 : Running: /usr/sbin/vznetcfg init veth ve1010.0
VE 1010 : VE start in progress...
```

```
Today (standard level 0)
# vzctl start 1010
Starting VE ...
VE is mounted
Setting CPU limit: 50 (--verbose)
Setting CPU units: 1000 (--verbose)
Configure meminfo: 10240 (--verbose)
Set hostname: vs1010
Configure veth devices: ve1010.0
VE start in progress...
```

```
As I would like it (loglevel should not matter):
# vzctl start 1010
Starting VE ...
VE is mounted
Set hostname: vs1010 (maybe --verbose)
Configure veth devices: ve1010.0 (maybe --verbose)
VE start in progress...
```

```
(--verbose, same as today)
# vzctl --verbose start 1010
Unable to open /usr/lib/vzctl/modules/: No such file or directory
Starting VE ...
Mounting root: /var/.../root/1010 /var/.../private/vz20061009
Running: /etc/vz//conf/vps.mount
VE is mounted
Running VE script: /etc/vz/dists/scripts/none
Setting CPU limit: 50
Setting CPU units: 1000
Configure meminfo: 10240
Set hostname: vs1010
Running VE script: /etc/vz/dists/scripts/none
Configure veth devices: ve1010.0
Running: /usr/sbin/vznetcfg init veth ve1010.0
VE start in progress...
```

```
Then I could have:
# vzctl enter 1010
```

entered into VE 1010

```
root@dev-test2:/#
```

```
# vzctl --verbose enter 1010
```

entered into VE 1010

```
Open /dev/pts/0
```

```
root@dev-test2:/#
```

> I suppose CONSOLE_LEVEL option can be added.
Don't think it's needed.

> Care to make a patch?
Maybe. If you like the above, and give me some pointers.
--quiet is a little to quiet :-)

> Thanks,
> Kirill

Regards,

Kristian,

your comment looks quite reasonable.
a) --quite and --verbose affect console output only.
b) LOGLEVEL to affect log file output.

Sounds fine.

Thanks,
Kirill
