Hello

Help me, please

Launch

```
# vzctl start 101
```

```
Dump file /var/lib/vz/dump/Dump.101 exists, trying to restore from it
```

```
Restoring container ...
```

```
Error in check_ext4_mount_restrictions (ploop.c:1929): FS_IOC_GETFLAGS
```

```
/var/lib/vz/private/101/root.hdd/root.hdd: Inappropriate ioctl for device
```

```
Failed to mount image: Error in check_ext4_mount_restrictions (ploop.c:1929):
```

```
FS_IOC_GETFLAGS /var/lib/vz/private/101/root.hdd/root.hdd: Inappropriate ioctl for device [21]
```

```
Starting container...
```

```
Error in check_ext4_mount_restrictions (ploop.c:1929): FS_IOC_GETFLAGS
```

```
/var/lib/vz/private/101/root.hdd/root.hdd: Inappropriate ioctl for device
```

```
Failed to mount image: Error in check_ext4_mount_restrictions (ploop.c:1929):
```

```
FS_IOC_GETFLAGS /var/lib/vz/private/101/root.hdd/root.hdd: Inappropriate ioctl for device [21]
```

```
After moving image.
```

Please check and report the underlying filesystem of /var/lib/vz.

It is a ext3 or ext4 ?

Which ovzkernel is used?
