Hi Folk,

I have created OpenVZ containers using Proxmox.

Is it possible to apply packet loss or delay on venet0 interface using NETEM (tc qdisc add .....)?

I tried using below command..
tc qdisc change dev venet0 root netem loss 0.1%

I am getting error ..
RTNETLINK answers: No such file or directory

Is that means, NETEM is not compatible with OpenVZ kernel?
Any help will be appreciated. Thanks in advance!!
with Regards, Kuldeep

have you loaded the kernel module sch_netem on hardware node?

Did you try using tc qdisc list to see what is in effect? This error sometimes means you are referring to a non-existent entry.

Hi,

Thanks Curx and KelvinSmith for the responses. Now I am able configure delay and packet loss using NETEM on the interfaces.

Error was because of non-existent entry. I was trying to change the loss without adding qdisc to the interface so I was getting error.

I applied the below configuration and it works...

tc qdisc add dev venet0 handle 1: root htb
tc class add dev venet0 parent 1: classid 1:1 htb rate 100Mbps
tc class add dev venet0 parent 1:1 classid 1:11 htb rate 100Mbps
tc qdisc add dev venet0 parent 1:11 handle 10: netem delay 100ms 10ms 25%
tc filter add dev venet0 protocol ip prio 1 u32 match ip dst $ destinationIP flowid 1:11

As already stated, I am using ProxMox to create containers. I am not able to install any package on hardware node. I am using below command
apt-get install iperf
I am getting error.....
Not able to locate the package iperf
Can any one know the reason and solution ? Thanks in advance !
Thanks and Regards,
Kuldeep
