Hi,

I'm having trouble with second level quotas since a kernel update. My old kernel options are gone because it was more than 3 versions old (auto removed by yum).

I'm suspecting it has to do with the kernel options in grub.

title OpenVZ (2.6.32-042stab113.11)

root (hd0,0)

kernel /vmlinuz-2.6.32-042stab113.11 ro root=/dev/mapper/vg\_host-root

rd\_LVM\_LV=vg\_host/swap rd\_NO\_LUKS rd\_LVM\_LV=vg\_host/root rd\_NO\_MD

SYSFONT=latarcyrheb-sun16 crashkernel=auto KEYBOARDTYPE=pc KEYTABLE=us

rd\_NO\_DM LANG=en\_US.UTF-8 rhgb quiet

initrd /initramfs-2.6.32-042stab113.11.img

Do you think it could be related? Please let me know if you need more info.

Thanks
