Subject: need help building via-rhine.ko

I have CentOS 7 with upstream kernel 3.10.0-327.4.5.el7.x86_64, which loads via-rhine.ko
3.10.0-123.el7.x86_64 normally and network works like a charm.
But when I try to load this via-rhine.ko 3.10.0-123.el7.x86_64 with latest vzkernel
3.10.0-229.7.2.vz7.9.30 kernel panics appears!
Then I built via-rhine.ko from sources using vzkernel-3.10.0-229.7.2.vz7.9.30.src.rpm and got
kernel panic again.

Anybody could help me building via-rhine.ko for 3.10.0-229.7.2.vz7.9.30?

Hi,

> But when I try to load this via-rhine.ko 3.10.0-123.el7.x86_64 with latest vzkernel
3.10.0-229.7.2.vz7.9.30 kernel panics appears!

That's quite expected, RHEL and Virtuozzo kernels are not binary compatible.

> Then I built via-rhine.ko from sources using vzkernel-3.10.0-229.7.2.vz7.9.30.src.rpm and got
kernel panic again.

And this way it should work.
Please, file a bug to bugs.openvz.org and post there step-by-step (with commands) what you've
done and resulted panic message.

Hope that helps.

Thanks, I've posted a bug ... but why so crazy password policy for your JIRA?
