Hello,

I am kinda new to Ubuntu/Linux/Unix so please bare with me. I have purchased a virtual private server and installed Ubuntu 14.10 on the server, afterwards I have Installed VirtualBox on the server and I have created a Windows 7 machine. When I try starting up my box it gives me this error.

I tried using the command '/sbin/rcvboxdrv setup' to reinstall the kernel module but after pressing enter it gave me another error.

When I do uname -r this what comes up:

I tried going on Google to search for the kernel module, but I had no luck in finding the right Linux Header. I would appreciate it if you could help me out, I'm new to Linux and I'm trying to figure out this problem I am having.

Thanks,
Matthew

This does not appear to have anything to do with OpenVZ so why it is posted here, I have no idea. Do you have an OpenVZ related question you forgot to ask?
