Hi All,

i'm at a loss, my old Servers motherboard decided it was going to fry, after speaking with the DC team they set up new hardware and the server was up and running however the HD went into read only mode and would not allow recovery, they have now set up a new HD and the old HD is mounted as /oldhd and i am trying to move the old VZ Containers to the new HDD so the old HD can be recycled, Can anyone help with the transfer of the old VZ Containers to the new HD without losing any of the data? 1 is running a cpanel/WHM centos server with 1 LARGE website on there and it is also running a secondary VZ which is a small container just holding a few files and a simple apache/php.

The Node is running
CentOS 6
AMD Sexcore server
16GB RAM
2 * 1TB HDD
1GBPS Port / 33TB bandwidth
VZ Web Panel

Latest OpenVZ by todays date.

Any help would be appreciated as i am really struggling and need to get these containers back up ASAP.

Thanks in Advance

Dan

Hi,

you can follow steps from Upgrade guide to move your containers from OpenVZ-legacy to the OpenVZ 7 -
 https://docs.openvz.org/openvz_users_guide.webhelp/_migratin
g_containers_from_openvz_based_on_kernels_2_6_18_and_2_6_32_ to_virtuozzo_7.html
