For the past few days, the network interfaces in a container aren't loading. When trying to restart the network services, the output shown below is what I get. I've found SOME information online about this but none of it's been helpful. Any suggestions, guidance, or fixes would be greatly appreciated.

Quote:

```
root@vps [/]# /etc/init.d/network restart
```

```
Shutting down loopback interface: ./network-functions: line 173: cd: /var/run/netreport: No such  
file or directory
```

```
[ OK ]
```

```
SIOCGIFFLAGS: No such device
```

```
Bringing up loopback interface: Device lo does not seem to be present, delaying initialization.
```

```
[FAILED]
```

```
Bringing up interface venet0: Device venet0 does not seem to be present, delaying initialization.
```

```
[FAILED]
```
