---

I am installing OpenVZ on an existing Centos 7.3 ISPCongig installation using rpms picked from <https://download.openvz.org/virtuozzo/releases/openvz-7.0.1-554/>.

Most of the RPMs have installed OK after chasing down the dependencies but vzquota-3.1-1.x86\_64.rpm has a failed dependency, vzquotamod, which I can't seem to find anywhere. I've tried Googling for it, obviously. As far as I can tell it is/was supposed to be provided by the vzkernel package but the current SRPM spec file of vzkernel doesn't mention it.

Is it provided by another package? If so which one?

CentOS Linux release 7.3.1611

These are the rpms I have installed so far satisfying dependencies:

libvcmmd-7.0.12-1.vz7.x86\_64.rpm  
libvzctl-7.0.293-1.vz7.x86\_64.rpm  
libvzevent-7.0.7-1.vz7.x86\_64.rpm  
ploop-7.0.74-1.vz7.x86\_64.rpm  
ploop-lib-7.0.74-1.vz7.x86\_64.rpm  
vzctl-7.0.120-1.vz7.x86\_64.rpm  
vzkernel-3.10.0-327.36.1.vz7.18.7.x86\_64.rpm  
vzkernel-devel-3.10.0-327.36.1.vz7.18.7.x86\_64.rpm  
vzkernel-headers-3.10.0-327.36.1.vz7.18.7.x86\_64.rpm  
vztt-7.0.43-1.vz7.x86\_64.rpm  
vztt-lib-7.0.43-1.vz7.x86\_64.rpm

I too had this issue:

```
# rpm -i http://download.openvz.org/utls/vzquota/3.1/vzquota-3.1-1.x86_64.rpm
warning: /var/tmp/rpm-tmp.6ZhXuA: Header V3 DSA/SHA1 Signature, key ID a7a1d4b6: NOKEY
error: Failed dependencies:
vzquotamod is needed by vzquota-3.1-1.x86_64
```

I get the impression that this doesn't work on OpenVZ/CentOS 7.
