Hello all.

I'm trying to figure out how to use the application templates. Here is what i got:

centos-7-x86_64   mailman
centos-7-x86_64   spamassassin
centos-7-x86_64   mysql
centos-7-x86_64   devel
centos-7-x86_64   php
centos-7-x86_64   tomcat

This is what vzpkg shows. But how can I create such a VE? There is no option like --apptemplate tomcat. Someone
can point me to the right direction?

thanks and cheers
t.
