Hello. I have a problem with the ubuntu 16 template
In case of installation of this template (
https://download.openvz.org/template/precreated/ubuntu-16.04-x86_64.tar.gz), the network
doesn't join, in the ifconfig parameters it is empty. But if to inscribe vzctl enter ID and service
networking start, then the network begins to work.
Please help how to correct that the network worked automatic?
With remaining templates of problems doesn't arise
