## Subject: My OpenVZ Container wont boot all of a sudden :-(
Posted by landman on Sun, 19 Mar 2017 01:29:39 GMT

The VPS failed to start

Starting container...
Opening delta /vz/private/101/root.hdd/root.hdd
Adding delta dev=/dev/ploop41002 img=/vz/private/101/root.hdd/root.hdd (rw)
Mounting /dev/ploop41002p1 at /vz/root/101 fstype=ext4
data='balloon_ino=12,usrjquota=aquota.user,grpjquota=aquota. group,jqfmt=vfsv0,'
Container is mounted
Adding IP address(es): 0.0.0.0 0.0.0.0 (IP Masked for security reasons)
Setting CPU limit: 10
Setting CPU units: 1000
Setting CPUs: 8
Killing container ...
Container was stopped
Unmounting file system at /vz/root/101
Unmounting device /dev/ploop41002
Container is unmounted

ist this ovz7?

Can you see more in the logs?

This is what they sent to me

"I tried to manually mount the 101 ploop drive and got below error. The ploop container of vps 101 is corrupted. I am making a copy of original data in /vz/private/101-restore. I will try to repair this copy, it may take a few hours. I see that you are also logged into the server. Please don't do anything on the server while I am working on it. It may create problems.

disk full?

you didn't reply my question if it is 6 or 7.
