i have an 2.6.32-openvz-042stab103.6-amd64 kernel on an wheezy openvz host.

I need strech for testing
A container upgrade from jessie to stretch has a warning that the kernel is not supported.
After that the container is dead.

Any chance to get an container with Debian Stretch working?

If there is an kernel uptdate on the host necessary ... i am afraid to crash a running system with lots of websites
