Hi,

I am trying to add a new server to panel OpenVZ but I can't do it. I write IP, password and I get "Ruby interpreter was not found on server".

However ->
root@dev04:/opt# ruby -v
ruby 2.4.0p0 (2016-12-24 revision 57164) [x86_64-linux]

Any idea?

thanks.

You need to ask this from whomever made that gui. There's no gui with OpenVZ.

Hi, thanks for your reply but I know that web gui isn't official but maybe someone had some info about that.

There's no way anyone can answer you because you haven't specified which version of OpenVZ you're using. If you're using 7, then there's no 'web gui' that supports OpenVZ 7.   You haven't specified which, of the dozen or so web gui's around, is the one you're using. That's why, your best bet is to post on the forum of the whichever web gui it is you installed, as you'll have a much greater chance of response.
